

New South Wales welcomes you to the Health familiarisation

17 June 2019

NSW Westmead Health, Education and Research Super Precinct

Australia's national healthcare system is regarded as one of the world's very best. In fact, it was ranked second in the world by the Commonwealth Fund.

At the epicentre of Australia's health and life sciences sector, New South Wales is the base for almost all global pharmaceutical and medical device companies in Australia.

World-leading education and research institutions underpin NSW's vibrant medtech industry. The co-location of major hospitals with major university campuses and medical research institutes offers an unparalleled opportunity for industry to meaningfully engage with the research community in developing treatments and innovations and bringing them to market.

With a state-of-the-art healthcare system, top research institutions and thriving medical and pharmaceutical industries, NSW is the ideal location to develop and market new medical technologies.

Who should attend

This visit program has been designed for investors, investment promotion agencies, international business chambers, economic development agencies and delegates. The program will equip delegates with insights into the evolution of the Health and Medtech sectors, an understanding of the scale of development and investment opportunities across the ecosystems and information to promote opportunities to clients.
