

# Delivering connectivity.

## Who we are.

Since 2007, Clearbox Systems has been Delivering Connectivity to customers around the world. We do this by providing technology solutions for the Operations and Management of Communications Networks and the Electromagnetic Spectrum.

Developed in Australia, and leveraging the best of our local and international partners, our software and hardware solutions are deployed across Commercial Broadcast, spectrum analysis, hardware research and development, along with an ever increasing focus on aviation and maritime communications management.

### Contact details

**Sydney Office**  
2/67 Epping Rd, Macquarie Park NSW

**Canberra Office**  
Suite 4, Gound Floor/5 Tennant St, Fyshwick ACT

## We have a rich history in space.

Our SATCOM Network Management capability provides exceptional end-to-end situational awareness across equipment and spectrum operations and availabilities, enabling Flexible Service Planning, Scheduling and Operations for system users.

We have developed our Foresight NMS to aggregate data and provide Planning, Scheduling and Operations functionality, presented via a browser-based user interface, allowing the system to be accessed from any workstation on a customer's network. Foresight can support both FDMA and TDMA and its modular architecture means additional modules are developed and plugged-in according to customer requirements. Clearbox Systems has been working with the Australian Defence Force for spectrum monitoring and monitoring & control of its network of SATCOM terminals since 2008.

## And we continue to thrive through collaboration.

Working with international space industry partners such as Kratos Communications, Inmarsat and Kythera Space Solutions, Clearbox Systems provides software solutions and physical integration services to provide real time signal processing, spectrum monitoring, network management and equipment and sensor monitoring for all terrestrial based SATCOM terminals and network control objects. Our support and integration efforts extend across Inmarsat, WGS and other commercial space environments.

## So why don't you join us?

Clearbox Systems currently partners with complimentary space businesses, including commercial entities, universities and the Australian Defence Science and Technology agency to better research, develop and implement cutting edge, novel solutions to new challenges arising from an ever increasing number of entities utilising SATCOM and SSA initiatives.

If you're looking to collaborate with us, we'd like to hear from you. Feel free to talk to:
